What I Bring to the Table

I'm a full-stack developer and IT generalist with 20+ years of experience in software development, architecture, and IT operations. I specialize in modern web, app, server and cloud technologies — designing scalable, robust, and maintainable systems.

I'm experienced in quality assurance for long-term projects — unit, integration, and end-to-end testing. Security follows the same logic: automated checks and scans, integrated into the daily development workflow and CI/CD pipelines.

I enjoy working with people from other disciplines — I explain tech without insider jargon and take ownership of delivery.

Languages

German (native), English (fluent)

What I'm Looking For

Looking for projects in web, app, and backend development — as a freelancer, with the actyvyst team, or in a permanent role.

Core Stack

React

React Native

HTML

CSS

Tailwind CSS

TypeScript

JavaScript

Python

Node.js
(Express)

PostgreSQL

MongoDB

Git/GitHub

Jenkins

AWS

Docker

Kubernetes

Where I Gained Experience

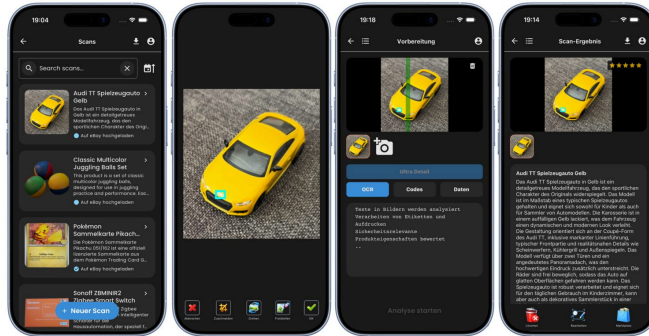

Software Engineer

2025-2026

SfP-IT GmbH

actyvyst GmbH

Scanly AI — development and operation of a consumer app for iOS and Android. From a single product photo, the app generates a complete eBay listing — product recognition, pricing, and description are all automated.

Links: scanlyai.de, [App Store](#), [Google Play](#).

Technologies: Expo, React Native, React Native Paper, TanStack Query, SignalR, Firebase, Notifications, RevenueCat.

Software Engineer

2025

Awareness Kitchen

actyvyst GmbH

Complete rewrite of the “Escape Box” iPad app, built from scratch. The interactive game master for security awareness training manages the game as a timekeeper and provides hints through multimedia and animations to guide players through the challenges.

Technologies: React Native, Expo, Gesture Handling, Animations, Videos, TypeScript.

Software Engineer

2024-2025

QiV - Qualität im Verkehr

actyvyst GmbH

Mobile Android app for recording and transmitting traffic counts. Field surveyors use the app to run configurable surveys and capture count data offline; data later syncs to a central

server, where it's consolidated and validated in an evaluation system.

Technologies: React, React Native, Node.js (Express), TypeScript, Excel: [Power Query, AddIn (VB Script), TaskPane (React)], .Net (C#), PostgreSQL, GitHub Actions, Clerk, Render.

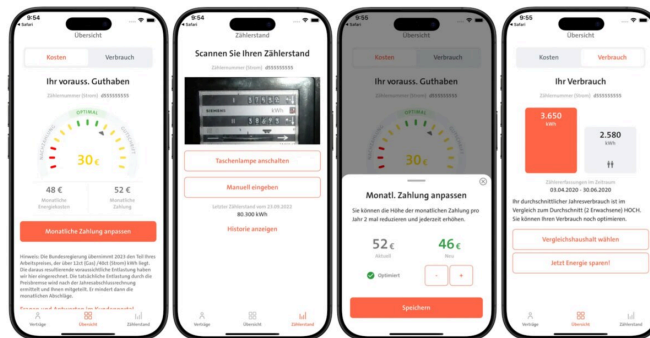

Software Engineer

2022-2025

badenova AG & Co. KG

actyvyst GmbH

The app enables meter reading (including camera integration), provides consumption forecasts, and supports monthly payment optimization. I developed the backend systems, integrated APIs, and set up the infrastructure — cloud, CI/CD, and Kubernetes operations.

Technologies: React, React Native, Node.js (NestJS, Express), TypeScript, Python (FastAPI), PostgreSQL, GitHub Actions, OAuth 2.0 (PKCE), AWS, Kyma (SAP), Kubernetes.

Lecturer

2023-2025

Taktsoft Campus Talents

actyvyst GmbH

I worked part-time as a lecturer, helping career changers enter the field of software development. I also created and updated parts of the curriculum.

TAKTSOFT
CampusTalents

Technologies: JavaScript, web development with React, app development with React Native (iOS, Android), API development with Node.js and Express, MongoDB, PostgreSQL.

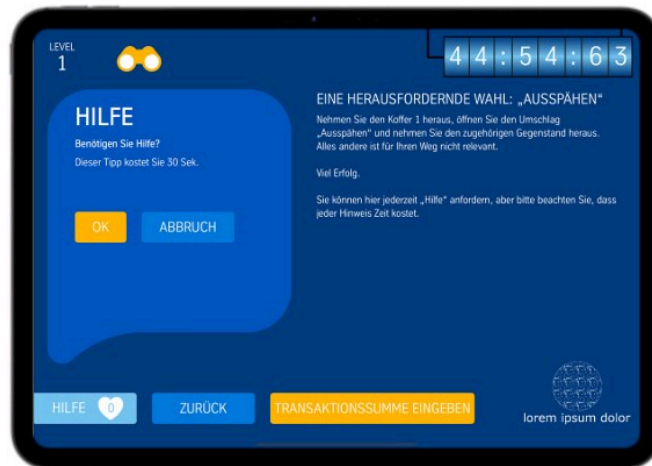

Software Engineer

2024

Awareness Kitchen

actyvyst GmbH

Initial version of the "Escape Box" iPad app — an interactive game master for an escape room experience. Designed as a playful tool for security awareness training, the app coordinates the game as a timekeeper and offers hints using multimedia and animations to guide players through the challenges.

Technologies: React Native, Expo, Gesture Handling, Animations, Videos, TypeScript.

Software Engineer

2022

actyvyst GmbH

Joined actyvyst GmbH as co-shareholder and software engineer — the start of the partnership through which all projects above were delivered.

Software Engineer

2022

Freelancer

Freelance project under the umbrella of actyvyst GmbH: development of a multilingual, multi-tenant system for booking leisure activities in tourist regions. The platform includes apps for Android and iOS, a customer-facing web app, an admin interface for offers, availability, and pricing, and white-label support for providers.

Technologies: React, React Native, Node.js (Express), PostgreSQL, AWS, AWS CDK.

Software Engineer

2019-2021

Senior Developer at Amadeus
Leisure IT GmbH, Aachen

As a Senior Developer, I drove engineering practices for internet booking engines on travel portals. My work included frontend and microservice development plus major contributions to infrastructure setup. I introduced trunk-based development, automated deployments, implemented CI/CD pipelines,

standardized test automation (unit, E2E, and integration tests), and established quality and security gates.

Technologies: Angular, TypeScript, Node.js (NestJS, Express), OpenAPI, ORM, MongoDB, Redis, Keycloak, Kubernetes, Kustomize, NGINX, Prometheus, ELK, Jenkins, Docker, Artifactory, Confluence, Jira, Jest, Cypress, SonarQube, Fortify, BlackDuck, OWASP ZAP.

Head of Software Development

2010-2019

Amadeus Leisure IT GmbH, Bonn

Managed up to 20 software developers at the Bonn location and served as an IHK-certified trainer for IT specialists in application development. Key responsibilities: leading the company's transformation into an agile organisation, migrating the software portfolio into the Amadeus Group, and owning the travel agency solutions for the DACH market. From 2010 to 2014, I was also instrumental in developing and rolling out the "Trusted Reviews" platform internationally — verified hotel reviews from real travellers.

Team Lead in Software Development

2000-2010

pixell daten & design GmbH,
Bonn

My career started at a start-up specializing in digitalizing marketing processes in the travel industry, where I grew from developer to team lead. We developed the live pricing solution "pixell Travel Suite", licensed by major companies including Expedia, TUI, HRS, REWE, and RCCL. We also built the first mobile app in Germany for booking package holidays — used by Expedia, TUI, and Kuoni. The work was recognized with the Travel Technology Innovation Award and the Travel Industry Club Award.

Student

1995-2000

University of Bonn

Five years of Diplom-Informatik (Computer Science) studies — solid grounding in theory and applied computer science.
